SOFTWARE TESTING QUIZ

Questions and Answer Review

Prepared for PAVENDHAN A

Recorded result: 73 correct | 12 incorrect | 15 unattempted | Accuracy 73%

.

Questions with answers

Q1. In case of Large Systems

Answer: In large systems, test cases written by good test engineers should be executed.

Q2. Test Conditions are derived from

Answer: Specifications (requirements/specification documents)

Q3. Pick the best definition of quality

Answer: Conformance to requirements

Q4. One Key reason why developers have difficulty testing their own work is:

Answer: Lack of objectivity (developers may be biased toward their own work)

Q5. In a review meeting a moderator is a person who:

Answer: Facilitates/moderates the meeting and ensures it runs effectively (not merely taking minutes)

Q6. How much testing is enough?

Answer: the answer depends on the risk for your industry, contract and special requirements

Q7. Which of the following is NOT a standard related to testing?

Answer: IEEE 610 (a general software engineering glossary/terminology standard, not a dedicated software-testing standard in this question's likely syllabus context)

Q8. The standard that gives definitions of testing terms is:

Answer: BS 7925-1 (the testing terminology standard expected by this quiz)

Q9. Which of the following is NOT true of incidents?

Answer: The statement that incident resolution is the responsibility of the author of the software under test is NOT true.

Q10. Which of the following is false?

Answer: A system is necessarily more reliable after debugging for the removal of a fault (this is false; fixing one fault can introduce another).

Q11. Which of the following is the odd one out?

Answer: functional

Q12. Which of the following is a static test?

Answer: Code inspection

Q13. Which of the following is a black box design technique?

Answer: Equivalence partitioning

Q14. Which of the following is not the integration strategy?

Answer: Design-based (not a standard integration strategy)

Q15. What type of review requires formal entry and exit criteria, including metrics?

Answer: Inspection

Q16. Which of the following items would not come under Configuration Management?

Answer: Live data

Q17. Maintenance testing is:

Answer: Testing a released system that has been changed

Q18. Which of the following techniques is NOT a black box technique?

Answer: Boundary value analysis is a black-box technique, so the correct “NOT black-box” answer is likely a white-box technique; options are absent from the export.

Q19. In prioritizing what to test, the most important objective is to:

Answer: test high risk areas

Q20. Configuration Management Plan describes the Configuration Management procedures and structures to be used.

Answer: true

Q21. Phase Definition. It will come under

Answer: None of the listed options could be confirmed from this export; check the original options

Q22. Acceptance testing is known as

Answer: Beta testing (one form of acceptance testing; acceptance testing is broader)

Q23. Retesting the entire application after a change has been made called as?

Answer: Full regression testing

Q24. Boundary value analysis belongs to which testing method?

Answer: Black-box testing

Q25. What are the Types of Integration Testing?

Answer: All of the above (assuming the listed options are valid integration-testing types)

Q26. Product Risk affects The quality or performance of the software.

Answer: true

Q27. A metric used to measure the characteristic of documentation and code called as

Answer: Product metric

Q28. The process that deals with the technical and management issues of software development called as?

Answer: Software process

Q29. Which is Black-Box Testing method?

Answer: Equivalence partitioning

Q30. Configuration management procedures be implemented during _____

Answer: Throughout the software life cycle (from project initiation/development onward)

Q31. Which of the following is likely to benefit most from the use of test tools providing test capture and replay facilities?

Answer: Applications with a stable user interface and repetitive regression tests (capture/replay tools are most useful for repeatable tests)

Q32. What are the Testing Levels?

Answer: Component/unit, integration, system, and acceptance testing

Q33. Software testing accounts to what percent of software development costs?

Answer: Approximately 40–50% (depends on project and definition of costs)

Q34. How much testing is enough

Answer: the answer depends on the risks for your industry, contract and special requirements

Q35. Which of these can be successfully tested using Loop Testing methodology?

Answer: All of the above (assuming the options are valid loop-testing cases)

Q36. Which one of the following are non-functional testing methods?

Answer: Both B and C (as recorded; options not present in the export)

Q37. During the software development process, at what point can the test process start?

Answer: As early as possible, beginning with requirements analysis

Q38. Acceptance test cases are based on what?

Answer: Requirements

Q39. Independent Verification & Validation is

Answer: Independent verification and validation (IV&V) is performed by an independent party separate from the development team

Q40. Which of the following is not described in a unit test standard?

Answer: Stress testing

Q41. Which of the following is a form of functional testing?

Answer: Functional testing (for example, testing against specified functions/requirements)

Q42. Verification is

Answer: Process-based (verification checks whether work products meet specified requirements; commonly phrased as “Are we building the product right?”)

Q43. White box testing is not called as

Answer: Closed-box testing

Q44. Retesting of a single program or component after a change has been made is called

Answer: Unit regression testing

Q45. The sequence Requirement and Analysis, Design, Development or Coding, Testing, and Maintenance is called what?

Answer: Software Development Life Cycle (SDLC)

Q46. The testing which is done by going through the code is known as

Answer: White-box testing

Q47. Business Risk affects the organization developing or procuring the software.

Answer: False (business risk affects the organization; product risk affects product quality/performance)

Q48. Stratification is a technique used to analyze or divide a universe of data into homogeneous groups (strata).

Answer: True

Q49. Automation testing should be done before starting manual testing. Is the above statement correct?

Answer: No

Q50. Earlier a defect is found the cheaper it is to fix it. Is the above statement correct?

Answer: Yes

Q51. Informing the developer which bug to fix first is called

Answer: Priority

Q52. Retesting modules connected to the program or component after a change has been made is

Answer: Regional regression testing (terminology varies; often called partial/selective regression testing)

Q53. Alpha testing will be done at

Answer: Developers' site

Q54. Requirements specification, planning, test case design, execution, bug reporting, and maintenance—this life cycle comes under

Answer: Software Testing Life Cycle (STLC)

Q55. Standards and procedures for managing changes in an evolving software product is called

Answer: Configuration management

Q56. Path Tested = Number of Path Tested / Total Number of Paths

Answer: True, if the formula means paths tested divided by total identified paths (a coverage ratio)

Q57. This type of test includes how well the user will be able to understand and interact with the system?

Answer: Usability testing

Q58. Defects generally fall into the following categories?

Answer: All of the above (based on the quiz response pattern)

Q59. What is correct Software Process Cycle?

Answer: Requirements analysis → design → implementation/coding → testing → deployment/maintenance (the exact option wording was not included)

Q60. Maintenance Plan predicts the maintenance requirements of the system, maintenance costs and effort required

Answer: True

Q61. Beta testing will be done by

Answer: Users/customers

Q62. Validation plan describes the approach, resources and schedule used for system validation

Answer: True

Q63. Integration, It will come under

Answer: CMM Level 3

Q64. Which Software Development Life cycle model will require to start Testing Activities when starting development activities itself

Answer: V-model

Q65. A metric used to measure the characteristic of the methods, Techniques and tools employed in developing, implementing and maintaining the software system called as

Answer: Process metric

Q66. Check Sheet (Checklist) is considered a simple, but powerful statistical tool because it differentiates between two extremes.

Answer: False

Q67. Application should be stable. Clear Design and Flow of the application is needed for Automation testing.

Answer: True

Q68. Quality plan describes the quality procedures and standards that will be used in a project.

Answer: True

Q69. How severely the bug is affecting the application is called as

Answer: Severity

Q70. The name of the testing which is done to make sure the existing features are not affected by new changes

Answer: Regression testing

Q71. Management and Measurement, It will come under

Answer: CMM Level 4

Q72. ——— means under what test environment (Hardware, software set up) the application will run smoothly

Answer: Test bed / test environment

Q73. TQM represents

Answer: Total Quality Management

Q74. Optimization, Defect Prevention, and Quality Control. Its come under the

Answer: CMM Level 5

Q75. Unit Testing will be done by

Answer: Developers

Q76. Beta testing will be done at

Answer: User/customer environment

Q77. Quality Assurance methods are usually considered

Answer: Preventive

Q78. Who has the primary responsibility of setting the quality culture in the organization?

Answer: Senior management

Q79. Verification is

Answer: Verification checks whether the product is being built correctly against specifications (“Are we building the product right?”)

Q80. A regression test

Answer: A regression test helps ensure that changes have not adversely affected existing functionality.

Q81. Which of the following is not a static testing technique

Answer: Error guessing (dynamic testing, not a static testing technique)

Q82. Which of the following statements about component testing is not true?

Answer: “Component testing does not involve regression testing” is not true; component testing may include regression testing after changes.

Q83. During which test activity could faults be found most cost effectively?

Answer: During requirements/design reviews, especially early design activities (faults are cheaper to fix early)

Q84. The purpose of requirement phase is

Answer: All of the above (based on the quiz response pattern)

Q85. Which, in general, is the least required skill of a good tester?

Answer: Able to write software (usually the least essential compared with analytical, communication, and testing skills)

Q86. The process starting with the terminal modules is called

Answer: Bottom-up integration

Q87. Which of the following is not White box testing?

Answer: Closed-box testing

Q88. System Testing is ----

Answer: Black-box testing

Q89. What is the main goal of software testing?

Answer: To detect defects and provide information about software quality and risk

Q90. Which of the following is not a level in testing?

Answer: The original answer options are not included in the export, so this cannot be confirmed reliably

Q91. Following is not a technique of black box.

Answer: The original answer options are not included in the export, so this cannot be confirmed reliably

Q92. Smoke Testing is..... approach

Answer: Integration testing (smoke testing is often used as an initial build-verification approach; exact quiz wording may vary)

Q93. In which level testing is performed

Answer: At each applicable level of testing: component/unit, integration, system, and acceptance

Q94. It is one principal of testing is that Exhausting Testing is.....

Answer: Impractical and impossible

Q95. Which of the following is not a type of incremental testing approach?

Answer: The original answer options are not included in the export, so this cannot be confirmed reliably

Q96. Beta Testing is done at:

Answer: User/customer end

Q97. Unit testing is carried out by:

Answer: Developers

Q98. In software testing Verification is .....

Answer: “Are we building the product right?”

Q99. In static testing

Answer: Code is not executed

Q100. Cyclomatic complexity is carried out in

Answer: White-box testing
